

**AMENDMENTS TO THE ABSTRACT**

**Please substitute the following paragraph for the abstract now appearing in the currently filed specification:**

In a CAD system, upon selection of a series of process operations from the plurality of series of process operations and selection of a process body for expressing a shape of a portion to be removed from an original product body via an input device, a shape parameter of the selected process body is extracted from the original product body, a tool parameter for processing is determined based on the selected series of process operations and the extracted shape parameter, information of the process body is stored in the body data division, the tool parameter is stored in the process-contents division in relation to information of the process body, and the process body is displayed on the display device.
